[Watchcopy.live Stärke - Ihr Vorteil](#)[@Watchcopy vertreibt Replicas seit 2006](#)

Hochwertige Replica Luxusuhren in Deutschland. Unser Konzept:

Wir konzentrieren uns ausschließlich auf Uhren Replika der Spitzenklasse aus dem höchsten Preissegment.

Bitte beachten Sie, dass Suchmaschinen in letzter Zeit mit eintägigen Replica Uhren Anbietern übersät sind, die nach einem betrügerischen Schema arbeiten: Preis 500 Euro - 50% Rabatt = 250 Euro.

Lassen Sie sich nicht täuschen, es gibt keine Wunder. Hochwertige Replica Uhren können nicht für 250 Euro verkauft werden. Ein Uhrwerk der Uhrenklasse wie: Noob Factory, ARF, V9, AAA kostet mehr als 250 Euro. Heutzutage arbeiten alle ernsthaften Verkäufer, insbesondere in der Uhrenindustrie, nicht mit einer Marge von mehr als 10%. Wenn Ihnen ein Rabatt von 30 - 50% angeboten wird, dann handelt es sich um Betrug. 98% der Verkäufer von Replica Uhren aus Deutschland kaufen in China minderwertige Replikas zu einem Preis von 20 bis 50 Euro ein und verkaufen in Deutschland für 200 bis 250 Euro.

Was sind hochwertige Replica Uhren:

a. Vertrauenswürdige Replica Uhren werden mit derselben Ausrüstung wie die echte Uhr hergestellt und bestehen aus den gleichen Materialien:

HI-END synthetisches Saphirglas, Stahl 904L, AAA Werk mit 28800 Halbschwingungen pro Stunde, hohe Wasserbeständigkeit 10ATM, leuchtende SuperLuminova Stunden Markierungen, nickelfrei

Weitere Informationen finden Sie in der Rubrik - Qualität

b. Ein wichtiger Faktor ist neben den Materialien auch die Gleichheit mit dem Original, die oft nur durch die Verwendung einzigartiger und teurer Ausrüstung erreicht werden kann.

Oft erhalten wir von Kunden amüsante Fragen im Stil von "Bitte fertigen Sie es speziell für mich ..."

Eine echte Rolex oder Breitling wird nicht von Hand gefertigt, alles wird auf Präzisionsmaschinen gefertigt und erst am Ende des Prozesses gelangt die Uhr in die Hände eines Meisters mit einer Uhrmacherrupe, nur um einen Werbespot zu drehen, der Ihnen diese Theaterspiel für mehrere tausend Euro verkauft.

Mit Ausnahme des Theaterspiels «Meister mit einer Uhrmacherrupe», durchlaufen unsere Uhren Replica genau den gleichen Produktionsprozess.

c. Ein intellektuell gebildeter Käufer versteht, dass das Kopieren von markengeschützten Waren in den Ländern der Europäischen Union nicht möglich ist.

Wir garantieren eine schnelle Lieferung von besten Uhren Replica Uhren ohne Zoll sowie einen professionellen Garantieservice.

Weitere Einzelheiten finden Sie in der Rubrik: Zahlung und Versand.

In der Rubrik "Biete" in einem Replica Uhren Forum können Sie eine gebrauchte Replika Uhr inserieren.

Alle Fragen beantworten wir Ihnen gerne innerhalb eines Arbeitstages per E-Mail oder WhatsApp.

Auf unserer Website und unserem Web-Blog können Sie das Kopieren von Markenprodukten (wie Marken) zu anderen Verkäufern und auch über

Swiss or Japanese?

Difference between Swiss and Japanese Quality:

Body:

The materials that are used for the casing, bracelet, and exterior features of both types of watch are the same. The only difference is in the precision of the manufacturing. Some exterior details may be closer to the original and the exterior features of the watch may be more exact on the Swiss models.

Mechanism:

The biggest difference between Swiss and Japanese quality is the mechanism itself. Swiss quality watches are made with Swiss ETA movement and are actually made in Switzerland. They are identical to the original in every way. Japanese quality watches are made with Miyota movement. This mechanism can sometimes be less precise.

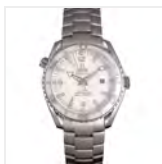

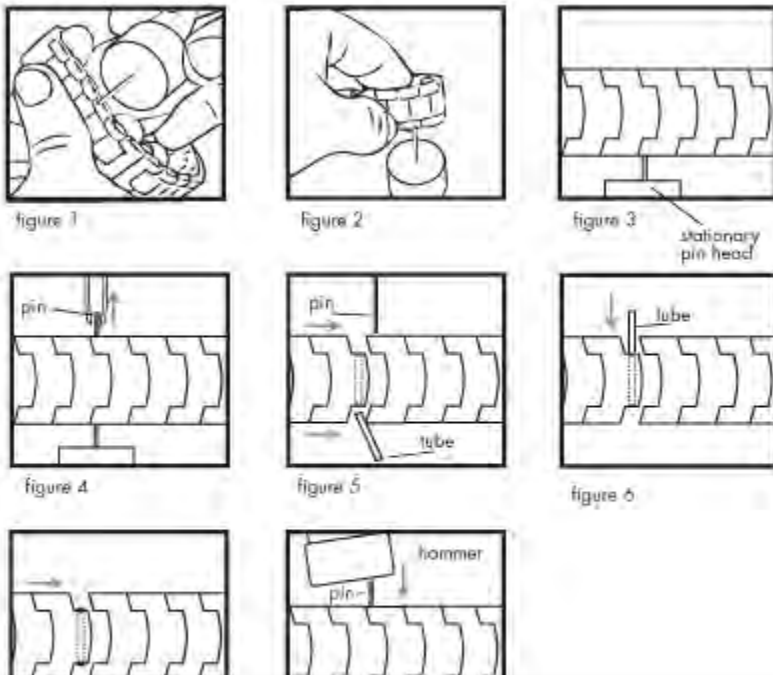

Features:

On Japanese quality watches the chronograph feature is sometimes just for show.
On Swiss quality watches the power reserve is better so it will need to be wound less.

Warning:

Although some sites may make a claim their replica watches are water proof no replica watch is water proof. They are water resistant. This means you cannot submerge your watch in water and you should remove it before taking a shower.

How to remove and replace links

Warning:

This watch is water resistant *not* water proof. You cannot submerge your watch in water and you should remove it before taking a shower.

Understanding your watch:

The Crown: The crown is the main dial or knob on your watch. It is the biggest and the center one to the right. It is used to set and wind your watch.

The crown has 4 positions:

Position 1: Closed- When you receive your watch the crown will be in the closed position. Once you have opened the crown you need to press the crown inwards and turn it clockwise to screw it back into the closed position. It is always advisable to keep the crown tightly closed when you are not adjusting the date or time.

Position 2: Winding- Starting with the watch in the closed position, if you turn the crown counter-clockwise the knob will unscrew, once unscrewed it will pop out. This initial position is for winding. Always wind in a clockwise direction (away from your body). Winding counter clockwise can damage your watch.

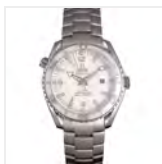

Position 3: Date- Starting with the crown in position 2 gently nudge the dial outwards by pulling with your thumb and forefinger. It is important to note that pulling it all the way out will move it to position 4. You need to find the sweet spot between position 2 and 4 to change the date. If your watch does not display the date there will be no position 3. When the crown is in the date position it is very important that you do not force it counter clockwise. You can damage the mechanism.

Position 4: Time- Starting from either position 2 or 3, with your thumb and forefinger pull the crown out until it stops. From this final position you can change the time. Always move the crown in a clockwise direction. Moving the dial counter clockwise can damage the mechanism.

*Some watches (Hublot & Cartier) have 4 different dials or knobs that are used for setting the date and time.

Operating Instructions:

Winding your watch: When you first receive your automatic watch you will need to manually wind it for approximately 1 minute. This is what we call 'jumpstarting' your watch. From position 2 turn the dial clockwise for 3 consecutive minutes. Do not turn the dial counter clockwise. You could damage the mechanism.

wise circles 3

Setting the Time: While the crown is in position 4 turn the dial clockwise (away from your body) until the hands have reached the correct position. Do not turn the dial counter-clockwise. You could damage the mechanism.

Setting the Date: With the crown in position 3 turn the dial clockwise (away from your body) to change the date. If your watch also displays the day you may be able to turn the dial counter clockwise to change the day. Do not force it; if your watch does not have this functionality you could damage your watch by turning the dial counter clockwise.

Chronographs: Many of our watch models feature up to 3 sub-dials. These are chronographs (essentially stop watches) with timekeeping intervals ranging from seconds to hours. The chronographs are activated with start/stop push buttons located next to the crown. To start a chronograph, simply push the button corresponding to that sub-dial, and press the same button again to stop it.

How is your watch powered?

Kinetic Watch: Your kinetic watch does not use a battery. Inside the face of the watch there is a small mallet which self-winds the watch according to the movement of your hand. If you take the watch off for more than 24 hours you may have to reset the watch and wind it.

Quartz Watch: A quartz watch is powered by a battery. The battery will need to be replaced regularly in order to keep your watch in working order.

Japanese vs. Swiss Watches:

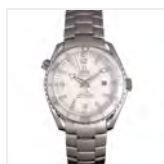

The materials that are used for the casing, bracelet, and exterior features of both types of watch are the same. The only difference is in the precision of the manufacturing. Some exterior details may be closer to the original and the exterior features of the watch may be more exact on the Swiss models.

Swiss quality watches are made with Swiss ETA movement and are actually made in Switzerland. They are identical to the original in every way. Japanese quality watches are made with Miyota movement. This mechanism can sometimes be less precise.

It is also common on Japanese quality watches that some of the functionality is for show only. By contrast, all the functionality of the Swiss watches is fully operational. The power reserve on the Swiss watches is better so it will need to be wound less.

Trouble Shooting:

Your Watch Stops Working: Your automatic watch does not use a battery and winds itself using the movement of your wrist. It is normal for a watch to stop after 24-48 hours of not being worn. You will need to wind your watch and reset the time as outlined in this pamphlet. It will then automatically wind itself once you start wearing it again.

Chronograph Doesn't Work: Our Swiss watches have fully functional chronographs just like the originals. If one of the chronographs stops working it needs to be serviced by a professional. Servicing a chronograph involves removing the case and manually restarting or replacing the mechanism that controls it.

Unfortunately many Japanese made watches do not have the separate mechanism necessary to operate multi-function chronographs. If you wish to have fully functional chronographs we recommend you purchase a Swiss quality watch.

Battery Powered Watch Does Not Work

If your watch is not fully operational when you receive it, it may be necessary to remove and replace the battery of your watch to restart it.

We recommend having your watch serviced once or twice a year to ensure the mechanism continues to work.

CUSTOMER REVIEWS

I just purchased a rose gold Audemars Piguet for a great price from PerfectCoral. They gave me a best price than everywhere else I shopped it. They overnighted the watch for me for free, so I got it the next day! Thank you guys so much. Will be recommending to all my friends.
